To: Highland Estates Residents and Shareholders of High Valley Water Company

Re: Utah State Lead and Copper Service Line Inventory

This letter serves as confirmation from High Valley Water Company, which services the Highland Estates subdivision, that there are no lead service lines in our district. The final service line inventory for High Valley has been classified as non-lead; meaning no lead, galvanized downstream of lead, or unknown service lines were found. The system was determined to be non-lead by performing a detailed review of all available records including but not limited to the following:

Aerial Imagery/Historical Imagery

Water system records, construction as-built drawings

Water distribution system inspections

Operation and maintenance records

Service line repairs and replacements

Installation and construction dates

Anecdotal Evidence

Minimum Service Line Verification Methods/Predictive Modeling was used to achieve 95% level of statistical confidence.

A validation pool was established by determining the minimum number of validations required. The selection was based off the randomly selected procedure outlined in the state's guidance document. The randomly selected investigation pool had their verification method by field inspection (meter pit verification, customer data, customer survey service line evaluations, verification of service line coming into home.)

Software utilized to manage data and water service connections such as: ESRI ArcGIS, AutoCAD, Excel

Below you will find a hyperlink to access and view the inventory.
